PROFESSIONAL SUMMARY

Passionate MS Computer Science graduate of the University of Georgia who thrives on turning complex problems into clean, scalable systems. Experienced shipping production-grade full-stack applications, designing RESTful APIs, and building intelligent automation pipelines. Driven by genuine curiosity for how software works at every layer: backend architecture, API design, data pipelines, and front-end delivery. Seeking new grad Software Engineer roles where strong fundamentals, hands-on project depth, and a bias toward building can make an immediate impact.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL, C++, C

Web / Backend: Spring Boot, Spring MVC REST, Next.js (App Router, RSC), React 19, Server Actions, Flask, Streamlit, REST APIs, Java HttpClient, Node.js (beginner), HTML5, CSS3, Tailwind CSS v4, JSON, Chart.js

Databases & Cloud: PostgreSQL, Prisma ORM, Neon (serverless Postgres), SQLite, JDBC, SQL, Google Cloud APIs, AWS (beginner)

Auth & Validation: Auth.js (NextAuth), Zod, OAuth

AI: Generative AI, LLM Prompt Engineering, Google Gemini API, ChatGPT, Claude, Claude Code, GitHub Copilot, Codex

Developer Tools: Git, GitHub, Vercel, Docker, Kafka, Maven, Jackson, Apache PDFBox, Apache POI, VS Code, Postman, Agile / Scrum

Core CS: Data Structures & Algorithms, Object-Oriented Programming, Client-Server Architecture, API Design

WORK EXPERIENCE

Graduate Research Assistant | ClimateAI [\[Live\]](#) [\[GitHub\]](#)

Athens, GA

University of Georgia

Aug 2025 – May 2026

Python, Flask, REST APIs, JavaScript, Chart.js, Google Gemini API, NASA Daymet, NOAA, OpenWeather, GeoNames

- Architected a full-stack NLP-driven climate app routing natural-language queries across 4 government REST APIs (NASA Daymet, NOAA, OpenWeather, GeoNames), consolidating 45 years of climate data with structured data routing and response normalization.
- Engineered a Python/Flask backend with 6 time-window analysis modes and 5-city simultaneous comparison support using structured mode-based aggregation and clean REST endpoint design.
- Delivered a front-end analytics dashboard with Chart.js rendering 9 climate variables, a 7-metric statistical panel, per-source provenance labels, and one-click CSV/PDF export for reproducible analysis.

Software Engineering Intern [\[Live\]](#) [\[GitHub\]](#)

Jul 2023 – Sep 2023

VIVA FIT

Remote, India

Next.js 16, TypeScript, PostgreSQL, Prisma, Auth.js, Zod, Vercel, Neon

- Built and deployed a full-stack fitness studio platform (Next.js 16, TypeScript, PostgreSQL, Prisma) with real-time class booking, role-based auth (Auth.js), and an admin CRUD panel.
- Designed a concurrency-safe booking system using Serializable Postgres transactions and unique constraints to prevent seat overselling and double-booking.
- Implemented server-rendered marketing pages and protected routes via Next.js middleware, with Zod-validated forms shared across client and server.
- Migrated the legacy static HTML/CSS/JS site to a production-grade full-stack app; deployed on Vercel with Neon serverless Postgres, managing schema via Prisma migrations.

PROJECTS

JobMatch Engine | Java Full-Stack Job-Search & ATS-Scoring Platform [\[Live\]](#) [\[GitHub\]](#)

Jun 2026 – Present

Java 17, Spring Boot 3.3, Spring MVC REST, Next.js 14, React, TypeScript, Tailwind CSS, SQLite/JDBC, Maven, Jackson, PDFBox, Apache POI

- Rebuilt a Python/Streamlit job-search automation tool as a Java Spring Boot + Next.js full-stack app with REST endpoints for résumé parsing, job discovery, ATS scoring, résumé tailoring, H1B lookup, and application tracking.
- Implemented concurrent multi-source job ingestion with Java HttpClient and ExecutorService across sponsor ATS boards (Greenhouse, Lever, Ashby, Workday, SmartRecruiters), aggregator APIs, remote APIs, and discovery search providers.
- Engineered deterministic résumé parsing and ATS-relevance scoring using Jackson, Apache PDFBox, Apache POI, keyword/skill matching, and LaTeX generation, plus a SQLite-backed tracker that deduplicates saved/applied jobs and hides already-applied roles from future Match & Score pulls.

EDUCATION

University of Georgia

Athens, GA

Master of Science, Computer Science | GPA: 3.85/4.0

Aug 2024 – May 2026

National Institute of Technology Karnataka (NITK)

Surathkal, Karnataka, India

Bachelor of Technology, Information Technology | CGPA: 3.21/4.0

Jul 2020 – Jun 2024

ADDITIONAL

- Solved 214+ problems on LeetCode (200-day streak badge, 2025) and 300+ on GeeksForGeeks, strong applied DSA practice.
- Ranked 3,198 out of 1.5 million applicants in JEE Mains 2020 (top 0.2%), demonstrating exceptional analytical ability.
- Co-authored "Weed Classification System" (CNN pipeline, 97% accuracy with ResNet50, surpassing the published DeepWeeds benchmark by 1.3 points) — submitted to SNCS 2025.
